

 PlatinumMD

EHR Simplified

Software development based directly on industry input for over 30 years:

 PlatinumMD

Advancing the Business of Medicine *is* Advancing Medicine

Our Company is Your Company

ePlatinumMD utilizes a rich and multi-dimensional software solution, based on the direct feedback from physicians themselves. ePlatinumMD selected ABEL Medical Software, Inc. to be its sole provider of EHR software. ABEL Medical Software Inc., a Microsoft Gold Certified Partner, provides physicians with comprehensive, fully integrated EHR and practice management software that is easy to learn and use. ABEL has a proven track record with over 30 years of experience and thousands of medical professionals use ABEL's software solutions to maximize the efficiency and profitability of their practices.

Making Healthcare Better

Our commitment to innovation is our contribution to sustainable healthcare. At ePlatinumMD, we consistently strive to foster a future, rising to the challenge of making healthcare better, more seamless, and more streamlined.

Philosophy of Interconnectivity

ePlatinumMD provides medical technologies and services: we are shaping a new age of patient care. Our expertise in Health Information Technology helps clinicians enhance medicine and simplify their practices. From the very first point of contact with your organization your patients' information is electronically stored on a redundant off site network, ensuring the integrity and safety of your data. Clinical activities, orders, medication administration, billing, documentation and results—every critical detail of a patient record is available to the care team at the push of a button.

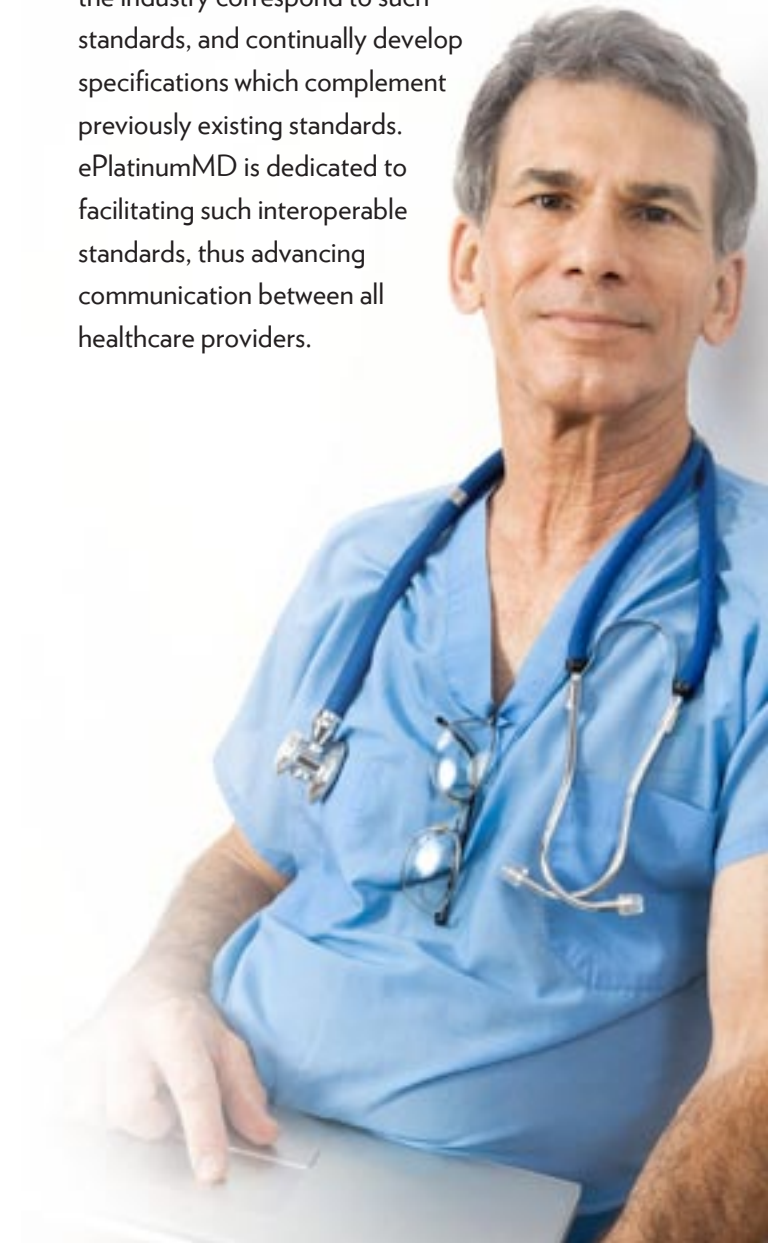

Towards a Sustainable Future

Answering the Call

By optimizing information technology facilities, we keep you up to date on all government regulations and requirements, and move to notify you immediately of changes. We offer a wide range of customer-oriented solutions, from Electronic Medical Records and Practice Management to Electronic Prescriptions and Billing.

Interoperability

Interoperability standards are designed to grant healthcare industry systems the ability to speak the same health data language. All levels within the industry correspond to such standards, and continually develop specifications which complement previously existing standards. ePlatinumMD is dedicated to facilitating such interoperable standards, thus advancing communication between all healthcare providers.

The American Recovery and Reinvestment Act

Approximately \$30 billion of the ARRA is allocated towards the improvement of healthcare via health information technology, chronic disease research, community health centers, and comparative effectiveness research.

The HITECH Act: Overview Physician Incentives

- \$17 Billion in incentives is granted for “meaningful use” of certified products as deemed appropriate by the Secretary of HHS
- EHR technology must be certified and utilized to further prove “meaningful use”
- Those adopting first benefit most
- Physicians can earn up to \$44,000 over a 5-year period from Medicare incentives if they are utilizing an EHR in 2011
- 2015: Medicare penalties begin for those who do not use EHR

“This will cut waste, eliminate red tape, and reduce the need to repeat expensive medical tests. It won’t just save billions of dollars and thousands of jobs—it will save lives by reducing the deadly but preventable medical errors that pervade our health care system.”

President Obama

Medicare Incentives Schedule					
Year	Eligible in 2011	Eligible in 2012	Eligible in 2013	Eligible in 2014	Eligible in 2015
2011	\$18,000	\$0	\$0	\$0	\$0
2012	\$12,000	\$18,000	\$0	\$0	\$0
2013	\$8,000	\$12,000	\$15,000	\$0	\$0
2014	\$4,000	\$8,000	\$12,000	\$12,000	\$0
2015	\$2,000	\$4,000	\$8,000	\$8,000	\$0
2016	\$0	\$2,000	\$4,000	\$4,000	\$0
Total	\$44,000	\$44,000	\$39,000	\$24,000	\$0

Select, Implement, Use

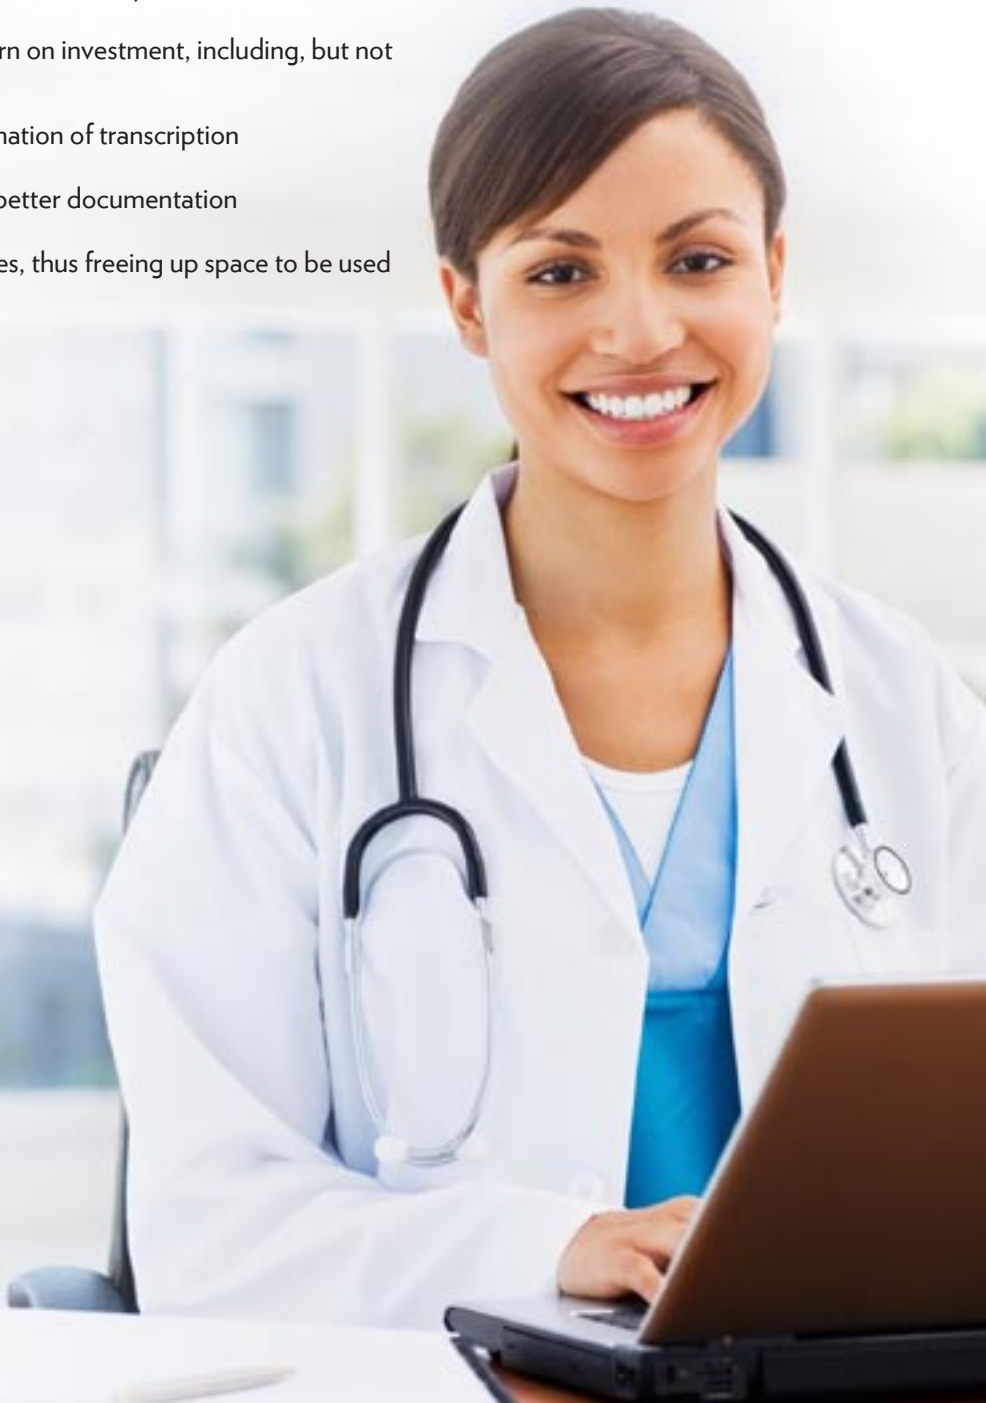

You must ensure that you evaluate workflow, develop selection criteria, select a vendor, develop an implementation plan, install a certified EHR, and connect to other providers in order to be fully functional and prove meaningful use.

HITECH and Meaningful Use Standards

Prior to the ARRA, providers would bear the entire burden of investing wisely in an EMR system. Though EMR improves practice performance and enhances patient care, there has been no previous standardization of Electronic Medical Record interoperability. The HITECH Act now incentivizes physicians to adopt a certified EMR. To receive the stimulus monies, the HITECH Act requires providers to prove the often quoted “meaningful use” of the certified EMR system.

Our clients consistently generate a rapid return on investment, including, but not limited to:

- Savings related to the reduction or elimination of transcription
- More accurate medical coding through better documentation
- Elimination of physical charts and supplies, thus freeing up space to be used for other purposes

ABELMed EHR-EMR/PM v11 Achieved CCHIT Certified® 2011 Comprehensive Certification*

ABELMed EHR-EMR/PM v11 was the first EHR product to achieve CCHIT Certified® 2011 Comprehensive certification*. We offer a money-back guarantee that our EHR solution will meet all the required criteria for Meaningful Use.

ABELMed EHR-EMR/PM v11 is fully integrated electronic health record and practice management software with e-Prescribing. Implement ABELMed in your office to save time, reduce expenses and increase revenue through better, faster patient care and also through optimized billing, grants and other incentives.

User Authentication

Login authentication provides a programmed automatic log off feature. All actions are chronicled and analyzed.

Data Security

Patient data is restricted per user according to their respective duties. During orientation, your staff is trained on data confidentiality.

Emergency Response

Emergency response procedures include data redundancy, information backup, and correction measures which are all continually reviewed and updated.

Comprehensive & Integrated Practice Management System

ePlatinumMD's automation tools ensure your timely collection of all receivables while conducting eligibility verification at check-in.

* Pre-market conditionally certified for Ambulatory EHR 2011 pending verification of operational use at two physician practices.

ePlatinumMD: Hard at Work to Make Your Job Easier

We are determined to supply you with the finest of software, and equip you with management solutions to streamline your practice. We pride ourselves on moving the seemingly impossible to the entirely possible, and have labored to attend to every detail of your practice needs, giving you the highlights of what our intuitive software offers: simplicity.

At ePlatinumMD, we strive for clarity and the freedom from unnecessary details that complicate the bulk of practice software, and have customized the most sophisticated aspects of technology into one user friendly, intuitive and elite practice management system

Multidimensional Technology

Our practice management solution is a collection of our very best thinking and innovation. We have combed through advances in the medical technology field to retain solutions that most benefit you. By leaving no software stone unturned, we are able to bring physicians the finest product available on the market. You will not find a competitor that approximates our design or exceeds us in technology. At ePlatinumMD, we have thought through all of the details so you do not have to.

Benefits

Though our temptation is to go “on and on” with a copious listing of benefits, we chose to highlight our favorites, as we recognize your time is important.

With ePlatinumMD solutions at your disposal, your patient scheduling has never been easier, your claims have never been more rapidly processed and your laboratory and procedure orders have never been more smooth.

Insurance companies have been notorious for confusing offices with specific language and codes since their inception: ABELMed EHR-EMR/PM has the capacity to clarify, organize and calculate reports automatically, delivering immediate answers to your most perplexing reimbursement dilemmas. With electronic prescribing, you eliminate the need for unnecessary phone calls to and from pharmacies, thus enabling you to refill authorizations within seconds and allowing you to recommend the most medically appropriate and cost effective prescriptions. Intra-office and inter-office communication has never been easier, as EMR, quite literally, allows you to be on the same page as your colleagues

Your Practice, Our Specialty

With veritably no misplaced files, your energy is conserved to be used more effectively elsewhere in your practice.

Save an enormous amount of time by electronically charting patient information, and patient encounters can be continually updated utilizing notes from previous visits.

Rapidly identifying patient eligibility for clinical trials is a simple process for physicians using EMR.

Electronic Claims and Remittances

Be alerted to errors before final claims submission, further reducing the time and cost involved with re-filing and denials.

Filing histories are on every claim, while notifications of payments are generated when they do not match given rates.

Laboratory Connectivity

- Receive lab results electronically
- Record results automatically within a chart
- Review, or, print results on the monitor
- Cumulative results may be charted as a table or graph for quick reference

Your Dashboard

Manage time and outstanding work, outlining items such as:

- Schedule
- Appointments
- Lab results
- Outgoing Tasks
- Incoming Tasks

Graphing and Tabling

Graphing information aids in health trend detection while providing a visual aid to patients.

- Record findings using a mouse, keyboard, voice dictation, or Tablet PC
- Combine templates, record added notes, or, gather information from a previous encounter

Administrative Scheduling

Many tasks are a click away from the scheduler. Display days and providers in any combination. Color-coding assists with identifying information ranging from arrival status to procedures regarding all appointments.

The ARRA and ONCHIT

The American Recovery and Reinvestment Act has set aside resources for physicians to adopt EMR systems.

Rigorous measures to be eligible for funds are currently designed by ONCHIT, this initiative's authority.

Stimulus Qualification Standards

- Two-thirds of the stimulus will be granted within the first two years of proven meaningful use of an EHR
- Grants decrease every year thereafter
- You must show meaningful use to receive stimulus
- Qualifying for stimulus funds has been underway since January 2010

Timed Funding

- Funding starts in 2011, decreasing incrementally through 2016
- Penalties for doctors who do not adopt EMR begin in 2015

Physical Data Maintenance

As physical records are stored at various sites, data sharing costs increase and time is wasted. With EMR, physical data maintenance is made obsolete.

Computerized Physician Order Entry

A component of EMR, CPOE catalogues prescribe directives. CPOE can reduce medical inaccuracies and eradicate undesirable drug events.

Not Just Medical Error Reduction, True Healthcare Advancement

Rapid retrieval of medical text supports continual developments in healthcare efficiency, allowing access to information for studies. An EMR standardizes documents, vocabulary, and information entry, all of which assist in the compilation of information for medical research.

Interoperability

Interoperability is key in Health Information Technology. Systems such as ours save money for everyone within the healthcare industry.

EMR

An EMR is an Electronic Medical Record created for the most comprehensive and thorough documentation of care. EMRs allow for the gathering and recovery of records. In addition to their ability to hold an indefinite amount of patient information, they also hold the advantage of increasing provider effectiveness, shrinking expenses overall, and serving to advance the standardization of healthcare.

EHR

An EHR, or, Electronic Health Record, is a compilation of Electronic Health Information: it is a digital record that has the dual ability to offer information in an all inclusive or synopsis format, encompassing a lifetime of health related data. EHRs offer records of patient visitations, results information, and put the physician in the most informed place to offer qualitative patient care.

From an EMR to an EHR

An EMR is an individual's health related data collected and handled within a single practice or medical institution. An EHR is an individual's health related data that has been collected and handled via many sectors or institutions. An individual's EHR cannot exist without an individual's originating EMR. A practice must first have the ability to create or review an Electronic Medical Record to generate and contribute to an Electronic Health Record.

The Use of Slashed Abbreviations

The two abbreviations, EMR and EHR, are often used interchangeably throughout the industry, however, there are fundamental differences between the two.

The "hyphenated" EHR-EMR signifies the interconnectivity between the two: an EMR "becomes" an EHR as an individual's health is monitored by many different providers over a lifetime.

The "hyphenated and slashed" abbreviation EHR-EMR/PM signifies Electronic Medical Records, Electronic Health Records, and Practice Management solutions, when simultaneously provided by one vendor. With ePlatinumMD, this full range of software and services comprises our complete Platinum EMR™.

By using merely a few of our available features, your time, energy, and money will be saved—now imagine using all of what ePlatinumMD has to offer.

PlatinumMD

EHR Simplified

From Integrated Electronic Health Records, Practice Management Systems, and Connectivity Solutions to Revenue Cycle Management Services, we empower healthcare providers to deliver the best in patient safety, clinical outcomes, and financial results.
